Navigating the New Normal: Biomanufacturing Goes Local

The pandemic has spared no industry. The life sciences industry knows this well and perhaps learned this lesson the hardest way during the pandemic when overseas supply shipments were delayed or, worse, when overseas manufacturing facilities were shut down because of government-mandated quarantines. Producing novel biologics is, unfortunately, not so easy to pick up and relocate, especially during a pandemic and even moreso when there are not enough domestic producers to begin with. As the life sciences industry continues to rapidly grow and mature in the U.S., life sciences clusters are growing and expanding into the next phase: biomanufacturing onsite and building their own self-sustaining supply operations. Learn more about the expansion of the domestic supply chain here.
